Ministry of Health gave cautious to Tanzanians on presence of dengue fever

Deputy Minister of Health, Dr Faustine Ndugulile admitted the existence of the patients were diagnosed with dengue fever while he directed health centers around the country make sure they are tested for those who get the virus when they are diagnosed with malaria

The problem we have dengue fever, now we have started to identify patients who suffer from Dar es Salaam and Tanga have not got any deaths so far

We have approximately 200 patients in Dar es Salaam but no one was harmed, I urge service providers to test patients if they are found to be eligible for the sick should be given treatment, "said Dr. Ndugulile and add

More than 70 percent of sick people malaria fever we have not, there UTI, typhoid all this is caused by a virus and dengue is one caused by a virus

We cannot deny that there is no one in Tanzania we are doing now to strengthen monitoring systems and have accurate data on public and private hospitals.

However, Dr. Ndugulile urged citizens to take precautions, including the areas mentioned and bury water and protect against mosquitoes.
